

Python Q&A; Set 2 – Conditions & Loops

Questions with clear answers for learning and interview preparation

1. What is an if statement?

Answer: It executes a block when a condition is True.

2. What are if, elif, and else?

Answer: if checks the first condition, elif checks additional conditions, and else runs when none are True.

3. How do you check if a number is even?

Answer: Use `number % 2 == 0`.

4. What is a for loop?

Answer: A for loop repeats code for each item in an iterable such as a list, string, or range.

5. What is a while loop?

Answer: A while loop repeats code as long as its condition is True.

6. What does range() do?

Answer: `range()` generates a sequence of integers, commonly used in loops.

7. What does break do?

Answer: `break` immediately stops the nearest loop.

8. What does continue do?

Answer: `continue` skips the rest of the current iteration and moves to the next iteration.

9. What does pass do?

Answer: `pass` does nothing and is used as a placeholder where a statement is required.

10. How can you check whether a number is prime?

Answer: For a number greater than 1, test whether it has any divisor from 2 through its square root.
