

Python Q&A; Set 4 – Functions, Modules & OOP

Questions with clear answers for learning and interview preparation

1. What is a function?

Answer: A function is a reusable block of code defined with def.

2. What is a parameter?

Answer: A parameter is a variable in a function definition that receives an argument.

3. What are *args?

Answer: *args allows a function to accept a variable number of positional arguments; inside the function it is a tuple.

4. What are **kwargs?

Answer: **kwargs allows a function to accept a variable number of keyword arguments; inside the function it is a dictionary.

5. What is recursion?

Answer: Recursion is when a function calls itself. It needs a base condition to stop.

6. What is a module?

Answer: A module is a Python file containing reusable code that can be imported.

7. What is a class?

Answer: A class is a blueprint for creating objects with attributes and methods.

8. What is an object?

Answer: An object is an instance of a class.

9. What is inheritance?

Answer: Inheritance lets a child class reuse and extend a parent class.

10. What is polymorphism?

Answer: Polymorphism allows the same operation or method name to work with different object types.
